

Altech Corp.®

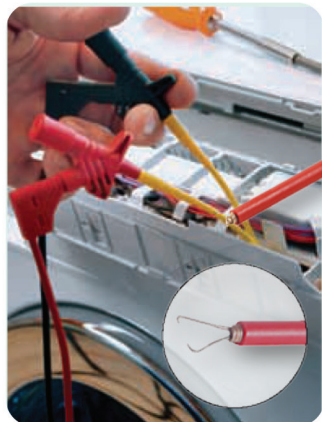

Test & Measurement Equipment

Altech is now the exclusive supplier of the well know line of Hirschmann Test & Measurement in North America.

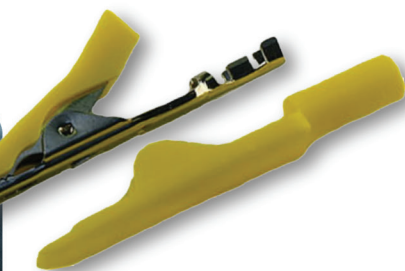

Clamp-Type Test Probes

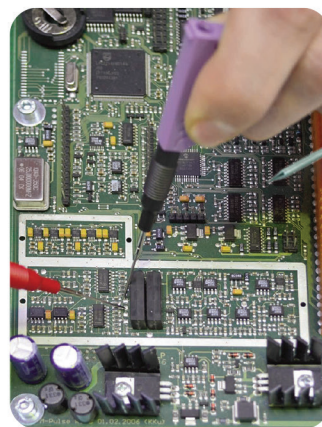

Measuring voltage quickly and easily – this is possible in a wide variety of situations with the units shown on the left. SKS can offer you the clamp-type test probe that you need even special solutions to enable access to difficult-to-access places. The flexible shaft allows you to connect to wires, pins and eyelets as well as to measuring clamps, and to the finest connections in the electronics field.

Alligator Clips

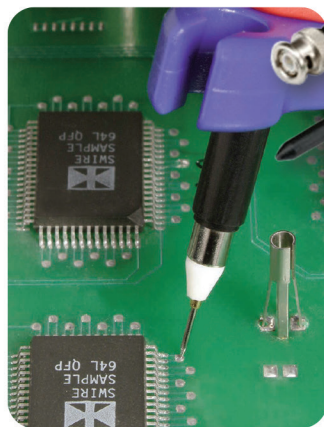

Large jaws that pack a punch: alligator clips firmly bite into the test specimen, making them perfectly suitable for machinemounted accessories in laboratories and for final inspections in industrial manufacturing. With alligator clips, you can have your hands free when you take measurements or take readings of the currents of the smallest components.

Test Probes

The SKS range of products offers you the right probe pressure for manual fieldwork and in electronics – whether you need to penetrate oxidation layers, or wish to establish contact with sensitive components or robust test specimens. The slim structure in particular, makes the testing of wiring systems much easier.

Oscilloscope Probes

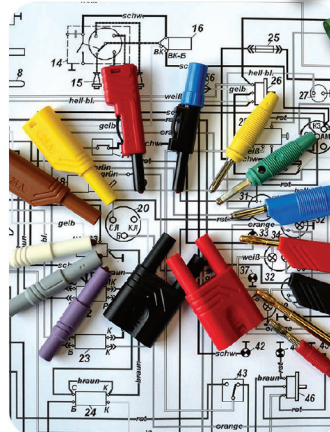

SKS continued to extend its product range by High-frequency Measurement. A modular construction of the oscilloscope probe systems and an comprehensive range of accessories enables a flexible working according to the requirements.

Measuring Leads

Whether it is for testing devices, testing media or for machine-mounted accessories – conductors are required simply everywhere. But they must be robust, flexible, capable of handling heavy loads and be particularly long-lasting. For this reason, SKS manufactures measuring leads from high-quality material and carefully monitors the entire manufacturing process. After all, quality makes a difference!

Plugs

SKS plugs are used everywhere in industrial research and development, given their proven track record over so many years.

Sockets

Available in many colors and types, the reliable SKS sockets and couplings are wherever a safe plug-in connection is required. They can be used e.g. as a connecting socket in network devices, as a connecting point in training devices or as test connection for measuring devices.

Sets

SKS continued to extend its product range by High-frequency Measurement. A modular construction of the oscilloscope probe systems and an comprehensive range of accessories enables a flexible working according to the requirements.
