

Foot Switches

Two Stage With Pressure Point

The pressure point is a mechanical resistance during the actuating pedal travel. This provides the user with added physical signals about the actuator position (tactile feedback).

The pressure point applies when using two contact elements with differently adjusted forward travel (two-stage switch)

- Pedal pressed up to pressure point: Switching point for first contact element
- Pedal pressed as far as it will go beyond the pressure point: Switching point for second contact element. The first contact element remains switched on.
- The force of the pressure point can be freely selected:
 - 15 N - 30 N - 140 N - 200 N - 460 N

Foot Switches

Two Stage With Pressure Point

Foot switches with pressure point have "D" in the article code which is suffixed to the contact element code. The protective shroud "UN" and the pressure point "D" are often used in combination in one foot switch.
